

INNOVATION DAY

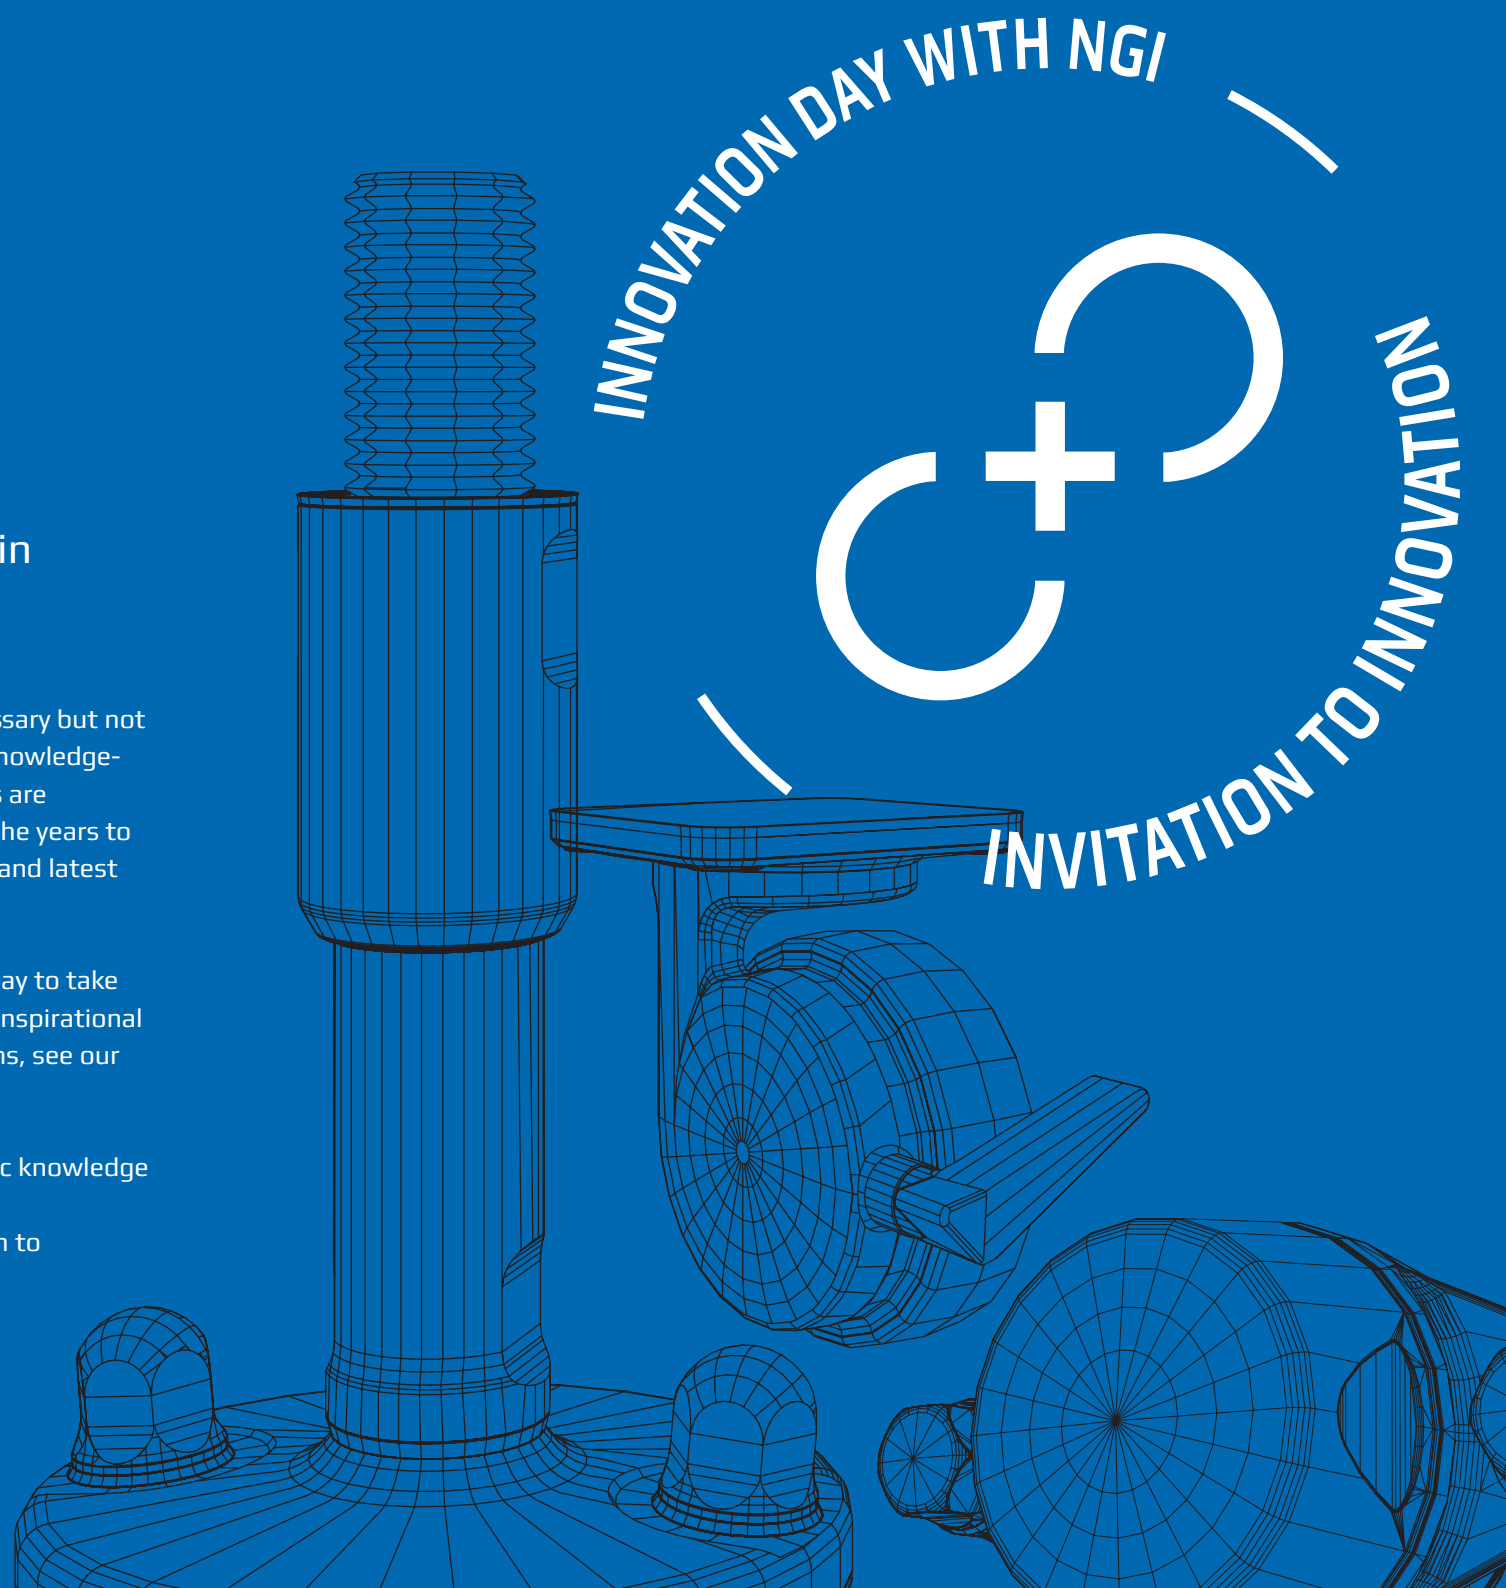

# INVITATION TO INNOVATION

For 50 years NGI has been setting new standards for hygienic design in production facilities worldwide.

We know, however, that high-quality products are necessary but not enough, if you want to create a strong hygienic chain. Knowledge-sharing, best practice, standardization and partnerships are imperative if we want to bring hygiene to new levels in the years to come. Therefore, we would like to share our experience and latest innovations with you and your organization.

Practically speaking, we'll arrange Hygienic Innovation Day to take place at your premises. We will invite the employees to inspirational knowledge-sharing session where they can ask questions, see our products and feel the quality.

Hygienic Innovation Day will improve the level of hygienic knowledge throughout your business from blue-collar to white-collar, and from practical staff with a hands-on approach to machine engineers, salespeople and hygienic advisers.

INVITATION TO INNOVATION

# AN INNOVATION DAY FOR YOUR EMPLOYEES' EYES ONLY

Our Innovation Lab is based at our main office in Aalborg, Denmark. But for one day, we would like to bring our knowledge, insights and experience to your premises.

## WHAT YOU GET IS A:

- ✓ A “mini show room” with products and information
- ✓ Experts giving talks and, first and foremost, being available for questions and discussions
- ✓ We learn more about your challenges and everyday experiences

On the day, we'll be available for 4-5 hours, thereby making it easy for everybody with an interest to pay the show room a visit.

As the name indicates, Hygienic Innovation Day is much more than a product showroom. We are also on a field trip to learn from you and listen to your challenges and everyday experiences.

We could collect all our knowledge in a whitepaper. But we would rather turn it into action by talking to the people, who work with the issues in everyday life.

## IT'S ALL ABOUT HYGIENE

The NGI culture consists of equal parts of professional skills and human understanding. We insist on always collecting, processing and sharing the relevant knowledge prior to a decision.

We help our customers solve complex problems and find the best possible solutions, whether it is at the negotiating table, on the factory floor or out in the production environment.

That is partnership in the real world. Join our Innovation Day and let's take hygienic design to a new level!

I look forward to meeting you and if you have any questions, feel free to contact me!
